

Cookie Policy

The Searchlight Security website uses a session variable, PHPSESSID, to store session information of interactions with the website. The PHPSESSID is native to technology used to produce the website and enables websites to store serialized state data. This is a strictly necessary part of the website and required by the website to function properly. The variable does not exist after a user's browser is closed. We do not store any personally identifiable information associated with the session variable. The Searchlight Security website also uses Google analytics to help provide the best service to our users. Our use of Google doesn't store, nor provide any access, to any personally identifiable information of website visitors.

In this, Searchlight Security adheres to the UK Privacy and Electronic Communications Regulations 2003 and the UK Data Protection Act 2018. We do not use any other cookies on the website.
